EDUCATION

Arizona State University

Tempe, AZ

Master of Computer Science; GPA: 3.5

January 2025 – December 2025

Bachelor of Science in Computer Science; GPA: 3.61

August 2020 – May 2024

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C#, SQL

Frameworks & Libraries: React, Node.js, Express.js, Quarkus, ASP.NET

Tools & Platforms: AWS, Git, MongoDB, Snowflake, Harness, GitHub Actions, Jupyter Notebook, Figma

EXPERIENCE

Software Engineer | Fullbay

July 2025 – Present

- Led integration between the Parts and Financials domains, leveraging Financials' APIs and shared components to ensure purchase orders, returns, and write-offs process reliably across teams.
- Owned the business logic for returning and writing off Cores (used parts eligible for credit), and initiated backend and UI refactors across the Parts domain, collaborating directly with Design and Product to improve maintainability and user experience.
- Architected and delivered RESTful and GraphQL APIs for analytics data and customer configuration management, enabling secure, high-availability access to internal business intelligence at scale.
- Contributed to the initial microservice-based infrastructure for Fullbay Next, a ground-up rebuild of Fullbay's core platform, laying foundational architecture ahead of its public release.

Backend Engineer Intern | Cadent

February 2025 – May 2025

- Developed a robust pipeline to process real-time bidding (RTB) data from digital ad auctions, extracting 2,000+ structured fields to support downstream machine learning and analytics.
- Automated feature selection using SHAP to identify the top predictors of bid pricing, improving model efficiency and reducing input dimensionality by over 95%.
- Configured and trained predictive models to estimate ad inventory pricing, identifying opportunities to improve auction revenue by up to 75%.

Software Engineering Intern | Warner Bros. Discovery

June 2024 – August 2024

- Developed a utility to auto-generate code documentation for internal testing frameworks using GitHub Actions and CI/CD pipelines, integrating into 90% of the team's test workflows.
- Designed and deployed a website to host the docs, allowing 10+ teams to enhance their understanding of quality engineering projects.
- Streamlined the tool for easy reuse by engineers generating their own documentation.

Software Development Engineer Intern | Amazon

June 2023 – September 2023

- Repaired the internal system that ensures data integrity for customer account information in Amazon Photos.
- Leveraged AWS to monitor and identify anomalies within customer data, upgrading the performance of 3 major data validation processes owned by the team.
- Created a script to scan large datasets and eliminate discrepancies, achieving 99.999% consistency across 10,000+ Amazon Photos accounts.

PROJECTS

Soundalike | Live App | GitHub Repository

React, TypeScript, Fastify, Vite

- Built a full-stack app to search and select songs and surface similar tracks, integrating Spotify's Search API with Last.fm's similarity engine after Spotify deprecated its native recommendations endpoint for new apps.

Glimpse | Live Extension | GitHub Repository

JavaScript, Chrome Extension API, Manifest V3

- Published a Chrome extension to the Chrome Web Store that displays instant word definitions, phonetics, and audio pronunciation on text highlight, powered by the Free Dictionary API.

Hangman | Live App | GitHub Repository

React, Node.js, Express.js, MongoDB

- Developed a full-stack browser game where players guess themed words across 8 categories: movies, video games, sports, idioms, TV shows, food, animals, and cities.
